Agenda

What Is a Dialog?

Creating Dialogs

Showing Dialogs

Improve the Dialog API

Styling Dialog Windows

What is a Dialog?

Showing a visual from or window over the current application

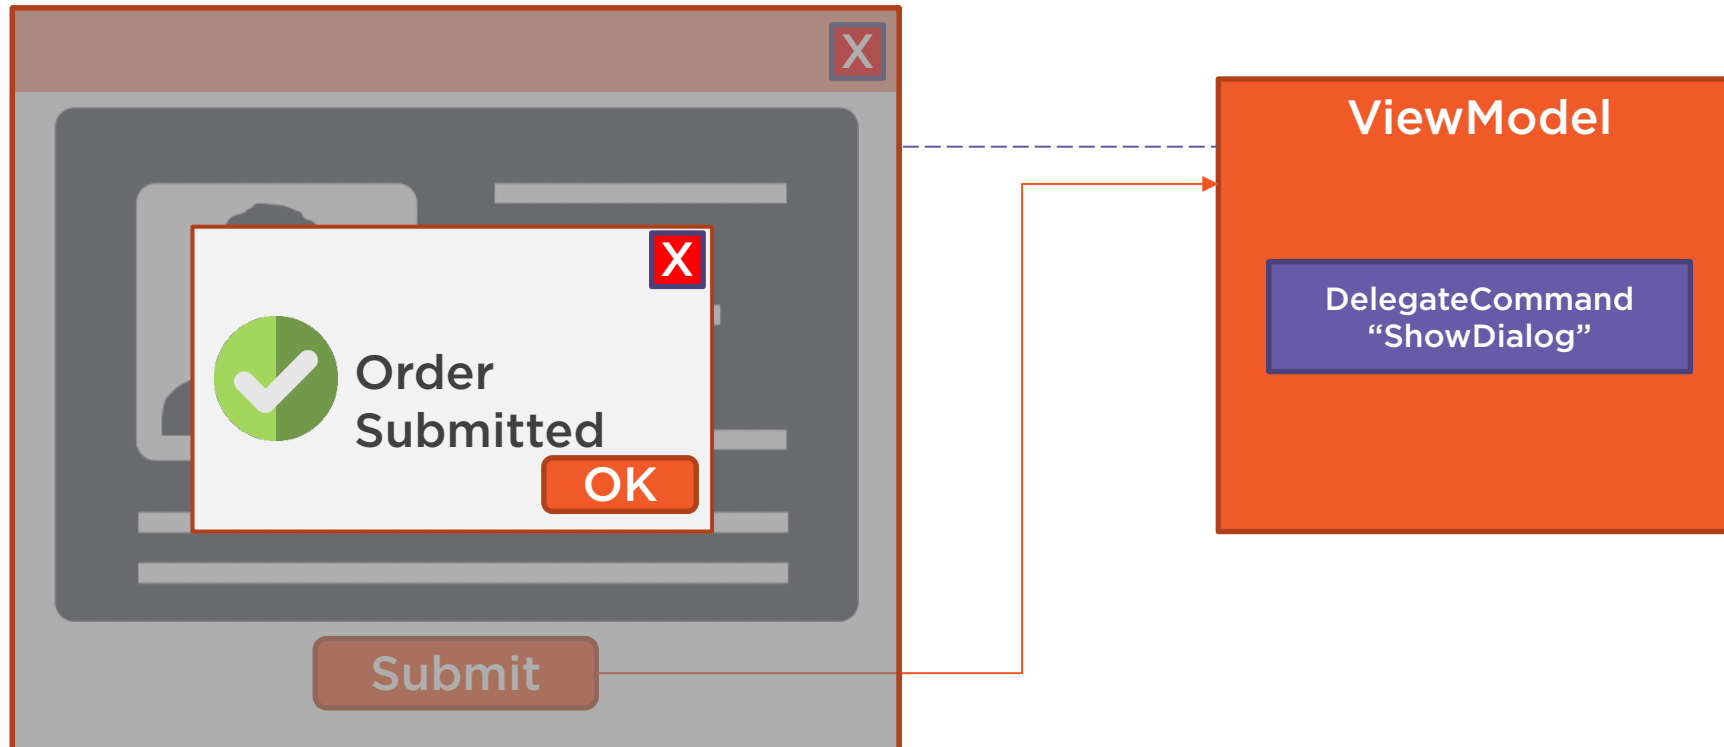

- Notify user
- Ask for confirmation
- Capture information

Modal/Non-Modal

Available in a ViewModel

Available in a ViewModel

Creating Dialogs

Dialog is a UserControl

- ViewModel is recommend

Must implement IDialogAware

IDialogAware

```
public interface IDialogAware
{
    string Title { get; }

    event Action<IDialogResult> RequestClose;

    bool CanCloseDialog();

    void OnDialogClosed();

    void OnDialogOpened(IDialogParameters parameters);
}
```

Creating Dialogs

Dialog is a UserControl

- ViewModel is recommend

Must implement IDialogAware

Register Dialog with container

- RegisterDialog<View, VM>()

Demo

Creating a Dialog

Showing Dialogs

Use the IDialogService

- Call Show (Non-Modal)
- Call ShowDialog (Modal)

Provide name of registered dialog

Pass parameters

Callback with result and parameters

Demo

Creating a Dialog

Improve the API

Extension methods to simplify common dialogs

Place in a Core project to be shared

Simplify Your API

```
public static void ShowNotification(this IDialogService dialogService,  
    string message, Action<IDialogResult> callback)  
{  
    var p = new DialogParameters();  
    p.Add("message", message);  
  
    dialogService.ShowDialog("NotificationDialog", p, callback);  
}
```

Demo

Simplifying your APIs

Styling the Dialog Window

Each dialog is hosted in a Window

Each Window instance can be styled per dialog

Dialog provides the Window Style

- `Dialog.WindowStyle` attached property

Style must target the Window type

Setting the `WindowStartupLocation`

- `Dialog.WindowStartupLocation`

Style Example

```
<prism:Dialog.WindowStyle>  
  <Style TargetType="Window">  
    <Setter Property="Height" Value="200" />  
    <Setter Property="Width" Value="400"/>  
    <Setter Property="ResizeMode" Value="NoResize" />  
    <Setter Property="prism:Dialog.WindowStartupLocation" Value="CenterScreen" />  
  </Style>  
</prism:Dialog.WindowStyle>
```
